# ATS facilityShield

Your building management system's (BMS) dedicated server and software is an essential element needed to keep your facility operating safely and smoothly. These components require maintenance like any other computer system. For facilities that do not have the resources or expertise on hand to service these systems, ATS offers facilityShield.

facilityShield from ATS is a low-cost way to ensure your BMS server is healthy, optimized, and up-to-date with the latest software and security patches. This online service ensures your BMS is continually up-to-date with security patches and anti-virus software. As part of the service your BMS is monitored for vulnerabilities to ensure your facility's investment remains secure.

To learn more or to begin facilityShield for your building, contact ATS at (425) 251-9680 or visit www.atsinc.org/services/facilityshield.
